8-mo Payback

THE PROBLEM

- DSO of 68 days**
vs. 35-day industry benchmark — representing significant working capital drag for the telecom GBS operation.
- 3,000+ monthly suspense items**
Unmatched payments sitting in suspense each month, straining collections and cash visibility.
- 80% manual effort**
45 AR staff spending nearly all their time on low-judgment matching tasks with zero analytical value.

THE APPROACH

- 01

Process Mapping
Mapped current-state O2C end-to-end — surfaced 6 manual bottleneck steps causing queue build-up.
- 02

AI Solution Design
Designed future-state using Claude (Anthropic) for intelligent remittance extraction and payment matching.
- 03

CFO Dashboard
Built real-time AR dashboard in Power BI — aging buckets, DSO trend, and exception drill-through.
- 04

Automated Aging
Replaced 45-minute daily manual aging report with a Python automation pipeline.
- 05

Financial Modelling
Modelled DSO impact, FTE efficiency gains, and working capital release with payback analysis.
- 06

Exception Workflow
Configured 80/20 split: AI handles clean matches autonomously; analysts own only complex exceptions.

✓ THE OUTCOME (PROJECTED)

DSO reduced from 68 → 38 days

Bringing performance in line with top-quartile benchmark.

AI auto-match rate of 80%

Analyst team redirected entirely to exceptions and disputes.

FTE headcount: 45 → 18

60% efficiency gain — redeployment or savings opportunity.

FINANCIAL SUMMARY

Annual Savings	Rs.1.35 Crore
Working Capital	Rs.420 Crore
Payback Period	8 Months
ROI	3.8x

★ MY FOUNDATION

18 months of hands-on O2C experience at Accenture GBS (Singtel Project)

● Personally recovered \$20M+ USD/SGD in suspense

● Reduced posting errors by 40%

● Processed 150+ daily transactions at 99.5% accuracy

"I designed the solution I wish I had."
